Advances in Transportation

Geotechnics IV Simon and Schuster
 The book presents the recent advances
 on testing and experimentation in civil
 engineering, especially in the branches
 of geotechnics, transportation,
 hydraulics, and natural resources. It
 includes advances in physical modelling,
 monitoring techniques, data acquisition
 and analysis, and provides an invaluable
 contribution for the installation of new
 civil engineering experimental facilities.
 The first part of the book covers the

latest advances in testing and
 experimentation in key domains of
 geotechnics: soil mechanics and
 geotechnical engineering, rock
 mechanics and rock engineering, and
 engineering geology. Some of the topics
 covered include new developments in
 topographic survey acquisition for
 applied mapping and in situ geotechnical
 investigations; laboratory and in situ
 tests to estimate the relevant
 parameters needed to model the
 behaviour of rock masses and land
 structures; monitoring and inspection
 techniques designed for offshore wind
 foundations. The second part of the book
 highlights the relevance of testing and
 monitoring in transportation. Full-scale
 accelerated pavement testing, and
 instrumentation becomes even more

important nowadays when, for sustainability purposes, non-traditional materials are used in road and airfield pavements. Innovation in testing and monitoring pavements and railway tracks is also developed in this part of the book. Intelligent traffic systems are the new traffic management paradigm, and an overview of new solutions is addressed here. Finally, in the third part of the book, trends in the field and laboratory measurements and corresponding data analysis are presented according to the different hydraulic domains addressed in this publication, namely maritime hydraulics, surface water and river hydraulics and urban water.

An Introduction to Energy Efficiency for Buildings IMO Publishing

Mit der Herausgabe der Empfehlungen, die normenähnlichen Charakter haben, unterstützt der Arbeitskreis "Baugruben" der Deutschen Gesellschaft für Geotechnik e.V. (DGGT) die Planungspraxis bei Entwurf und Berechnung von Baugrubenumschließungen. Alle Empfehlungen wurden gegenüber der vorherigen 5. Auflage gründlich überprüft, soweit erforderlich überarbeitet und an neue Erkenntnisse angepasst. Wesentlich geändert wurden die Erfahrungswerte für Mantelreibung und Spitzendruck von Spundwänden und Trägerbohlwänden. Das Kapitel "Baugruben in weichen Böden" konnte

erheblich gestrafft werden. Einem dringenden Bedürfnis der Praxis folgend wurde zudem ein völlig neues Kapitel "Unterfangungen" als Baugrubensicherung erarbeitet. Die Empfehlungen des Arbeitskreises "Baugruben" sollen helfen, - Entwurf und Berechnung von Baugrubenumschließungen zu erleichtern, - Lastansätze und Berechnungsverfahren zu vereinheitlichen, - die Standsicherheit der Baugrubenkonstruktionen und ihrer Einzelteile sicherzustellen und - die Wirtschaftlichkeit der Baugrubenkonstruktionen zu verbessern.
