**Advances in Artificial Intelligence. PRICAI 2000 Workshop Reader** Graphic Communications Group  
 This book constitutes the refereed proceedings of the Second Pacific-Asia Conference on Knowledge Discovery and Data Mining, PAKDD-98, held in Melbourne, Australia, in April 1998. The book presents 30 revised full papers selected from a total of 110 submissions; also included are 20 poster presentations. The papers contribute new results to all current aspects in knowledge discovery and data mining on the research level as well as on the level of systems development. Among the areas covered are machine learning, information systems, the Internet, statistics,

knowledge acquisition, data visualization, software reengineering, and knowledge based systems.

*Proceedings of the 2nd National Seminar, Institute of Management and Technology, Enugu, 9th-10th August, 2000, Federal Polytechnic Mubi, Yola Campus, 16th-17th August, 2000* Springer Science & Business Media

The field of education is in constant flux as new theories and practices emerge to engage students and improve the learning experience. Globalization has created new challenges for mathematics educators as they are compelled to respond to the shifting patterns and practices of everyday life and stay abreast of the latest research in education, curriculum, development, and technologies. Globalized Curriculum Methods for Modern Mathematics

Education is a comprehensive and timely publication that contains the latest research in mathematics education and modern globalized curriculum development and technologies. The book examines subjects such as teaching competencies, digital games for teaching and learning mathematics, and the challenges and prospects of globalized science curriculum. This is an ideal resource for educators, academicians, teachers, policy makers, researchers, and graduate-level students seeking to further their research in mathematics education. Blended learning continues to emerge as a more proactive and high quality method of teaching and learning. Yet as the academic landscape shifts towards technology-based efforts, the lack of economic support in developing countries has hindered its educational growth.

*Advancing Technology and Educational Development through Blended Learning in Emerging Economies* provides an insight on blended learning approaches and its importance in the educational development of emerging economies. This book is a vital resource for researchers, academics, professionals, and students involved in the management and organizational development of technology use in educational settings.

*Educational Assessment in a Time of Reform* provides background information on large-scale examination systems more generally and the South African examination specifically. It traces the reforms in the education system of South Africa since 1994 and provides a description of the advances in modern test theory that could be considered for future standard setting endeavours. At the heart of the book is the debate on whether the current standard of education in Africa is good enough . If not, then how can it be improved? The aim of this book is to provide a point of departure for discussions on standard-setting, quality assurance, equating of examinations and assessment approaches. From this point of departure recommendations for practices in general and the exit-level (Grade 12) examination results in particular can be made. This book is ideal reading for principals, teachers, academics and researchers in the fields of educational assessment, measurement, and evaluation.

*Graphic Showbiz* Routledge

This book constitutes the thoroughly refereed joint post-proceedings of four workshops held during the Pacific Rim International Conference on Artificial Intelligence, PRICAI 2000, held in Melbourne, Australia, in August/September 2000. The 32 revised full papers presented were carefully selected during two rounds of reviewing and revision. In accordance with the four workshops represented, the book is organized in topical sections on

applications of artificial intelligence in industry, artificial intelligence in electronic commerce, intelligent information agents, and teamwork and adjustable autonomy in agents.

*The Information Technologist* IGI Global Intergovernmental agencies, governments, and non-governmental organizations are now using Information and Communications Technologies (ICTs) to collect, organize, and disseminate information on peoples' rights, the promotion of human rights, and the protection of individuals and communities at risk. *Human Rights and Information Communication Technologies: Trends and Consequences of Use* will provide a comprehensive examination of the use and application of information and communication technologies in the world of human rights. This will contribute significantly to understandings of the impact of ICTs on the promotion and protection of human rights in societies around the world. This book will provide a valuable tool and insight for academics from a range of fields, including information management, information systems, communications, information technology, international relations, human rights, politics, law, and sociology. It will also be useful to international non-governmental organizations, non-governmental organizations, and governments for policy and practice.

The role humans play in the field of information technology continues to hold relevance even with the industry's rapid growth. People contribute heavily to the physical, cognitive, and organizational domain of computing, yet there is a lack of exploration into this phenomenon.

Humanoid aspects of technology require extensive research in order to avoid marginalization and insufficient data. *The Handbook of Research on the Role of Human Factors in IT Project Management* is a collection of innovative research on the methods and applications of the task of human characteristics in the design and development of new technology. While highlighting topics including digitalization, risk management, and task analysis, this book is ideally designed for IT professionals, managers, support executives, project managers, managing directors, academicians, researchers, and students seeking current research on the dynamics of human influence in technological projects.

School Science Practical Work in Africa

presents the scope of research and practice of science practical work in African schools. It brings together prominent science educators and researchers from Africa to share their experience and findings on pedagogical innovations and research-informed practices on school science practical work. The book highlights trends and patterns in the enactment and role of practical work across African countries. Practical work is regarded as intrinsic to science teaching and learning and the form of practical work that is strongly advocated is inquiry-based learning, which signals a definite paradigm shift from the traditional teacher-dominated to a learner-centered approach. The book provides empirical research on approaches to practical work, contextual factors in the enactment of practical work, and professional development in teaching practical work. This book will be of great interest to academics, researchers and post-graduate students in the fields of science education and educational policy.

*Trends and Consequences of Use* Springer Eight stories from the author of *A Book of American Martyrs* that display her "mastery of imagery and stream of consciousness" (Kirkus Reviews). Joyce Carol Oates is an unparalleled investigator of human personality. In these eight stories, she deftly tests the bonds between damaged individuals—brother and sister. teacher and student, two lonesome strangers on a subway—in the beautiful, bracing prose that has become her signature. In the title story, a white, aspiring professor in Detroit tries to shake a black, male shadow during the summer of the city's 1967 race riots. In "The Rescuer," a promising graduate student detours to inner-city Trenton, New Jersey, to save her brother from a downward spiral, only to find herself entranced by his dangerous new world. Meanwhile, a young woman prowls the New York City subways in search of her perfect man in "Lorelei." In each of these short stories, Oates portrays a desperate confrontation with the demons inside us. Sometimes it's the human who wins, and sometimes it's the demon. "Oates offers unexpected glimmers of redemption amid the grotesquerie, degradation, and exploitation that fill this collection's eight tales." —Publishers Weekly
