Since 2011 the world has experienced an explosion of popular uprisings that began in the Middle East and quickly spread to other regions. What are the different social-psychological conditions for these events to emerge, what different trajectories do they take, and how are they represented to the public? To answer these questions, this book applies the latest social psychological theories to contextualized cases of revolutions and uprisings from the eighteenth to the twenty-first century in countries around the world. In so doing, it explores continuities and discontinuities between past and present uprisings, and foregrounds such issues as the crowds, collective action, identity changes, globalization, radicalization, the plasticity of political behaviour, and public communication.

This book addresses the sustainability of happiness and well-being in Chinese societies. It starts by introducing the various conceptions of well-being, particularly in the Chinese sociocultural context. The book then proceeds with the examination of the sustainability of well-being by scrutinizing the effects of sociocultural, contextual, and personal factors on well-being. The contextual factors are the aggregates or averages of personal factors at the contextual levels of the regions and colleges in Mainland China, its special administrative region, and Taiwan. These factors cover personality traits, strengths, orientations, beliefs, values, and idolizing. By bringing together empirical studies and theoretical perspectives applied to Chinese societies, this book offers researchers in social science and humanities a valuable reference work on happiness and well-being in Chinese societies.

This book is about modern politics and young people. Judith Bessant revises some long-standing myths about children and young people's politics. She highlights the huge gap between the many ways young people and politics are talked about and how they have long been politically active. Bessant draws on a relational historical sociology to show how since the nineteenth century certain historical dynamics, political interests and social imaginaries have enabled social scientists, writers, political leaders and policymakers to imagine and 'make up' different kinds of young people. Given these representations of childhood, adolescence and youth, everyone knows that young people are cognitively immature, inexperienced, morally under-developed and lack good judgement. For these reasons they cannot possibly be allowed to engage in the serious, grown-up business of politics. Yet in just one of the many contradictions, young people are criticised by many of their elders for being politically apathetic and disengaged from politics. Many think recent global warming movements largely led by quite young people are a novel phenomenon. Yet young people have been at the forefront of political movements of all kinds since the French revolution. Since the 1960s, children and young people increasingly played a major, if sometimes obscured, role in civil rights, anti-war, anti-globalisation, anti-austerity and global-warming movements. This accessible book is rich in

theoretical and historical insight that is sure to appeal to sociologists, historians, youth studies scholars and political scientists, as well as to the general reader.
